

SYSTEM ONE

System One

Strategically harnessing knowledge.

Real Life isn't made up of folders.

Collaborate. Deliver results. Quickly. In the face of hundreds of emails, dozens of systems and endlessly nested folders, this has become almost impossible.

System One works the way you do: associatively, intuitive and flexible.

Everything relevant.

The Web shows how to do it properly: self-organization, making connections, bridging boundaries. And solving old problems.

System One brings together the latest web technologies in one platform.

The High-Performance Workplace.

Software that provides insight and transparency, that is easy to understand and has obvious, clear-cut benefits. Better results and less effort. In real-time.

System One delivers more at the end of a day.

There is no blueprint for the truly new.

60% of business activities are mapped in business processes: this is often optimized up to the last cent and second. The innovative potential usually resides in the other 40%.

System One opens up new perspectives.

Grasping the business.

Giving individuals a view of the whole. Connecting the right people, ideas and information.

System One creates sustainable innovation from within.

Solution

1 System One provides a **unifying real-time interface** to company data and external resources.

System One acts as a project hub, supporting immediate **informal collaboration** by cutting across process boundaries and department borders.

3 System One is an **innovation machine** that employs emerging technologies to realize the **high-performance workplace** even today. If you know how to use a web browser, understanding System One is a matter of minutes.

System One reveals the **connections between know-how and experts**, all without requiring any categorization, keyword assignment or other extra effort. Every employee can immediately harness **company knowledge**.

2 System One shows existing and **relevant solutions** while you're working. You see what's **truly essential** – no more getting lost in data silos, thousands of search results or waste lands of endlessly convoluted file folders.

System One manages the information overload.

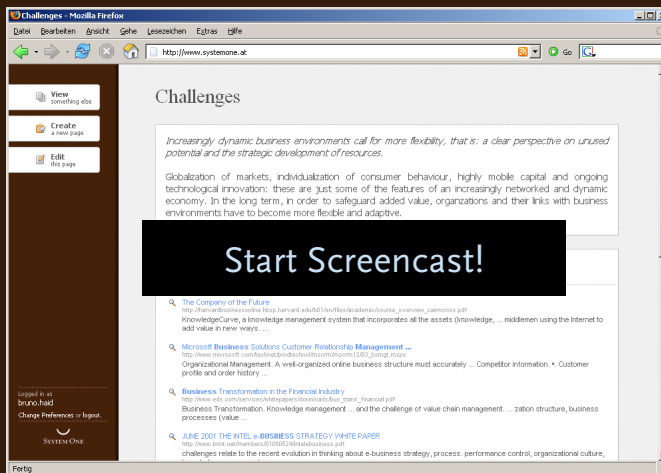

4 System One is a **safe investment** and integrates existing structures. System One infers the meaning and cohesion of a wide range of data sources, including legacy systems, ERP, portals, document and content management systems (DMS/CMS), mail servers and RSS feeds, all without affecting your established systems.

System One offers **low-maintenance** integration while being a **professional**, and, above all, **secure** solution.

Product

Technology Platform

An easy-to-use web interface that summarizes all relevant information and allows ad hoc collaboration:

Our service model prevents the necessity of high initial investment, implementations that drag on for months, high personnel costs and endless expenses for maintenance and support.

Accompanying Services

Most technological systems fail because they miss the point about how people actually work and about the make-up of social relationships in a company. Truly seamless integration takes more than technological expertise.

Evaluation: finding the right approach by looking at the right people and their actual problems.

Design: coming up with a solid, integrated package of what's feasible and what makes sense.

Support: monitoring clearly defined targets, assisting the in-house champions.

Your benefits

- 1 Competitive advantage through a more efficient and effective business structure:

Better decisions, higher flexibility and lower communication costs allow you to shape increasingly dynamic market environments more actively.

- 3 Clear documentation of activities and current company performance:

Well-founded arguments when talking to clients, partners, employees, shareholders, analysts and other stakeholders.

- 2 More control in information- and knowledge-based areas:

More transparency shows you what's already there, what's needed and how well individual measures are working.

- 4 Better leverage of internal developments and existing resources:

Build more efficiently on information already developed, avoid redundancy and compensate for fluctuations.

Your benefits from an IT perspective

1 Quickly employ cutting-edge technology:

Implement key technologies in one fell swoop and at low cost, minimizing investment risk.

3 Seamless integration of heterogeneous information structures:

Merge structured and unstructured information from a wide range of different systems without any need to adapt them.

2 Our service model saves time and reduces effort, complexity and cost:

You pay for a ready-to-use web service, but not for hardware, basis software, staff or long periods of project planning and implementation.

4 Support costs are reduced:

The simple, web-based interface (and configuration) of the central system renders tedious training, phone calls to helplines and client updates unnecessary.

Technology

Social Software

Powerful, easy-to-use corporate wiki and weblog system acting as a front end.

Semantic Web

Highly scalable graphs database as a back end, comes with flexible bottom-up ontology management and an agents environment.

Information Retrieval

A perfect mix of text-based algorithms, automatic metadata inference and social-network analysis.

All of the above is individually tailored to your organization's specific needs.

Next Steps

We are happy to show you on-site what System One can specifically do for you.
